

ABSTRACT

Muffler Device of a Motor Vehicle

In a muffler device (1) of a motor vehicle, with mufflers (2, 3) and actuator (4) for changing the flow resistance to the exhaust gases flowing through, in order to change the damping characteristic, it is proposed to provide the actuator (4) in a flow branch (5) having an inlet (6) and two outlets (7, 8), each outlet (7 or 8) being connected via a pipe (9 or 10) to a muffler (2 or 3), and the throughflow cross section (D) of the inlet (6) being variable by means of the actuator.
